NSA Launches Statistical Mobile App and Geographic Portal

Functions of the NSA

- To constitute the Central Statistics Authority for the State. This means undertaking any census, the gathering of administrative documents, information or record, and storage of information, as well as the collection of spatial data for statistical purposes.
- To collect, produce, analyse and disseminate official and other statistics in Namibia.
- To facilitate the capture, management, maintenance, integration, distribution and use of spatial data.

Mobile Statistical App

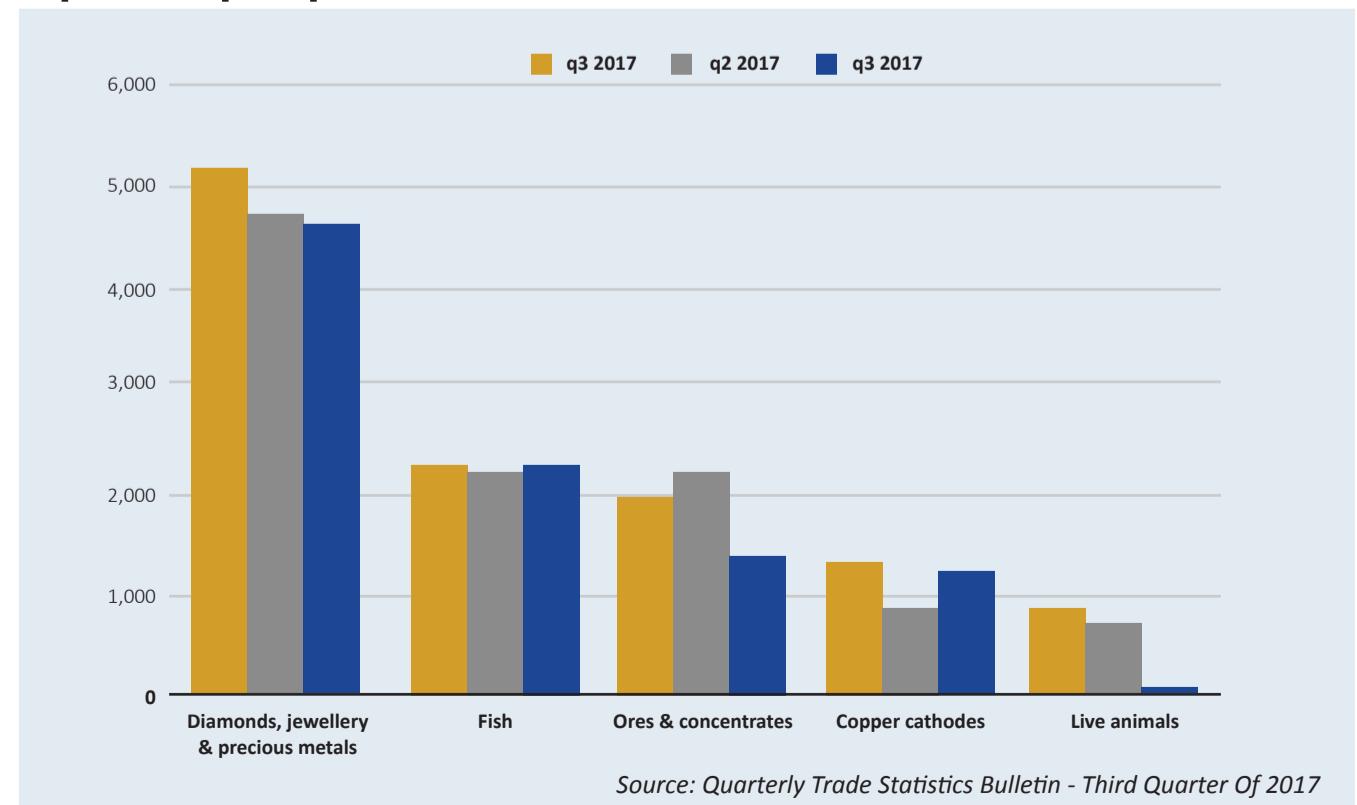

The Namibia Statistics Agency recently joined the technology fray with the development of the Statistics Mobile Application. The App which allows for one to access statistics from their mobile phone was necessitated by the challenges the Agency faces in the dissemination of statistics.

The Statistics App allows one to download and use it at a later stage, even if there is no internet or in offline mode. One only has to access internet facilities when updating the information that is uploaded onto the App. It also allows for one to store information such as publications on to their mobile phones for easy access. The App also has a function where one can compare and contrast changes in subjects such as the population.

National Geographic Portal of Namibia

The NSDI Policy states that the NSDI Secretariat (NSA) shall ensure that there are mechanisms in place to access spatial data and metadata. Since national geographic portals are commonly and widely used to find and access spatial data, the NSA embarked on developing a geoportal and metadata catalogue for spatial data in Namibia. In order to ensure that the stakeholders are involved and their inputs are incorporated, NSA hosted a geoportal appraisal workshop on the 7th of June 2017. The workshop served as a platform for stakeholders to give their recommendations regarding access to and dissemination of spatial data. The installation of the initial national geoportal and metadata portal on NSA's infrastructure was done during the period of 12 to 16 June 2017. More than five (5) NSA staff were fully involved as part of building capacity in the Agency.
